MEMORANDUM FOR: Chief, Defensive Systems Division, OSI

25X1 ATTENTION: [REDACTED]

THROUGH:

Chief, Requirements Branch, Reconnaissance Group, CGS

FROM:

Chief, CIA/PID (NPIC)

25X1 SUBJECT:

Leningrad AMM on [REDACTED]

REFERENCE:

- (a) Requirement C-SI-3-80,+37
- (b) CIA/PID Project C 1091-63

25X1 1. This memorandum is in response to your requirement dated 21 July 1963 requesting an updating of the probable AMM facilities at Leningrad, USSR, based upon [REDACTED].

2. An examination of the Leningrad AMM facilities on [REDACTED] revealed no new facilities at the AMM complexes, including the support facilities, the possible AMM training site, and the suspect electronic sites since [REDACTED]. A remeasurement of the curved buildings by TID/NPIC revealed them to be 90 feet at the small axis to 130 feet at the large axis and approximately 50 feet wide. An approximate shape of the curved building is shown on the attached line drawing. The demarcations extending out from the curved buildings are approximately 50 feet in length. There appear to be five demarcations in every case where a determination can be made. The radius of the curved building has not been provided due to the unreliability of such a determination at this time.

25X1 The launch complexes at all three sites appear complete at this time. The electronics site at the southwest complex appears most advanced and in the late stage of construction. The electronics site at the northeast site appears to be least advanced and is in the early stages of construction. The northwest electronic site appears to be in a mid-late stage of construction. A line drawing of the objects in the probable electronics facility is attached herewith. No new support buildings have been discovered on [REDACTED].

25X1 3. The photo analyst on this project is [REDACTED] who may be contacted on [REDACTED] should you have any further questions concerning this project.

4. This project is considered to be complete.

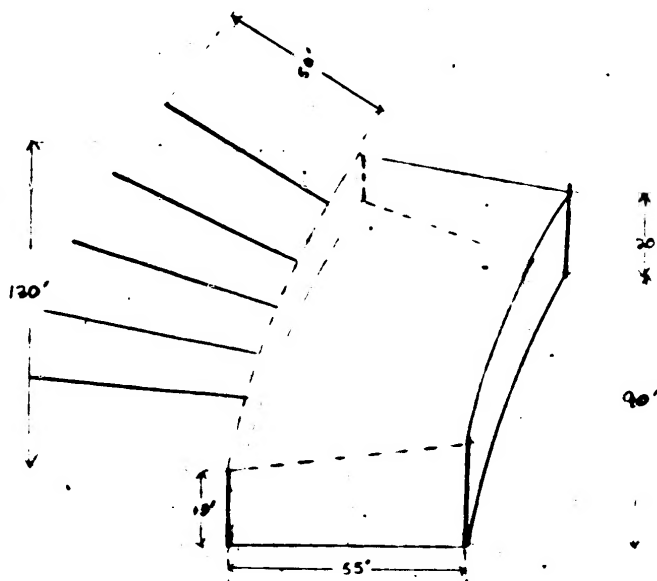

5. This project has been coordinated with [REDACTED] PAG/NPIC.
